Children's Toilet

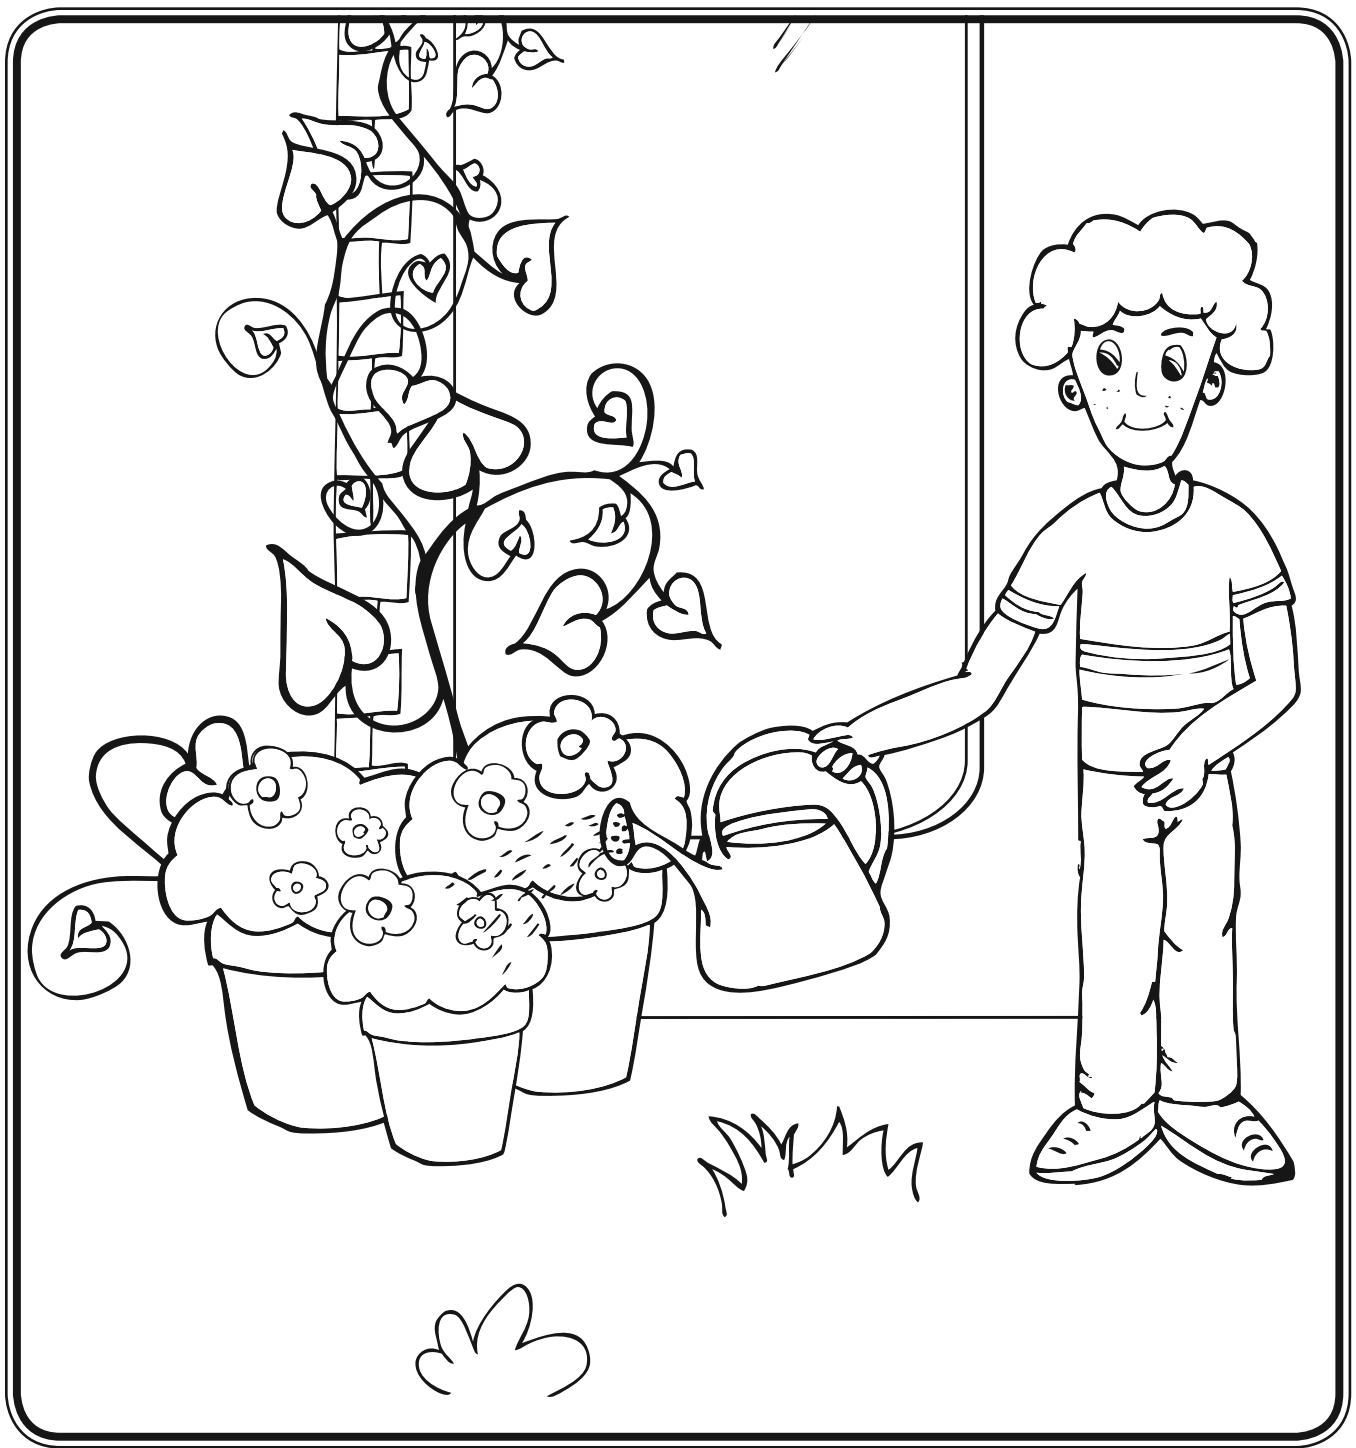

Ultra Flush® 1.1 gpf

To conserve water, use a broom instead of a garden hose to clean driveways and sidewalks!

When you water the flowers and the plants for your parents, use a sprinkling can – it uses less water than a garden hose!

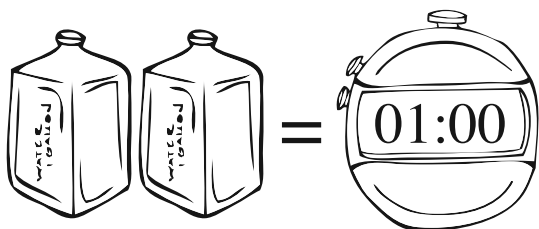

Use a bucket and a sponge when you wash your car or bike – a garden hose can waste six gallons of water a minute!

Instead of running the faucet waiting for cool water to drink, keep a bottle of drinking water in the refrigerator. This can save up to 300 gallons every month.

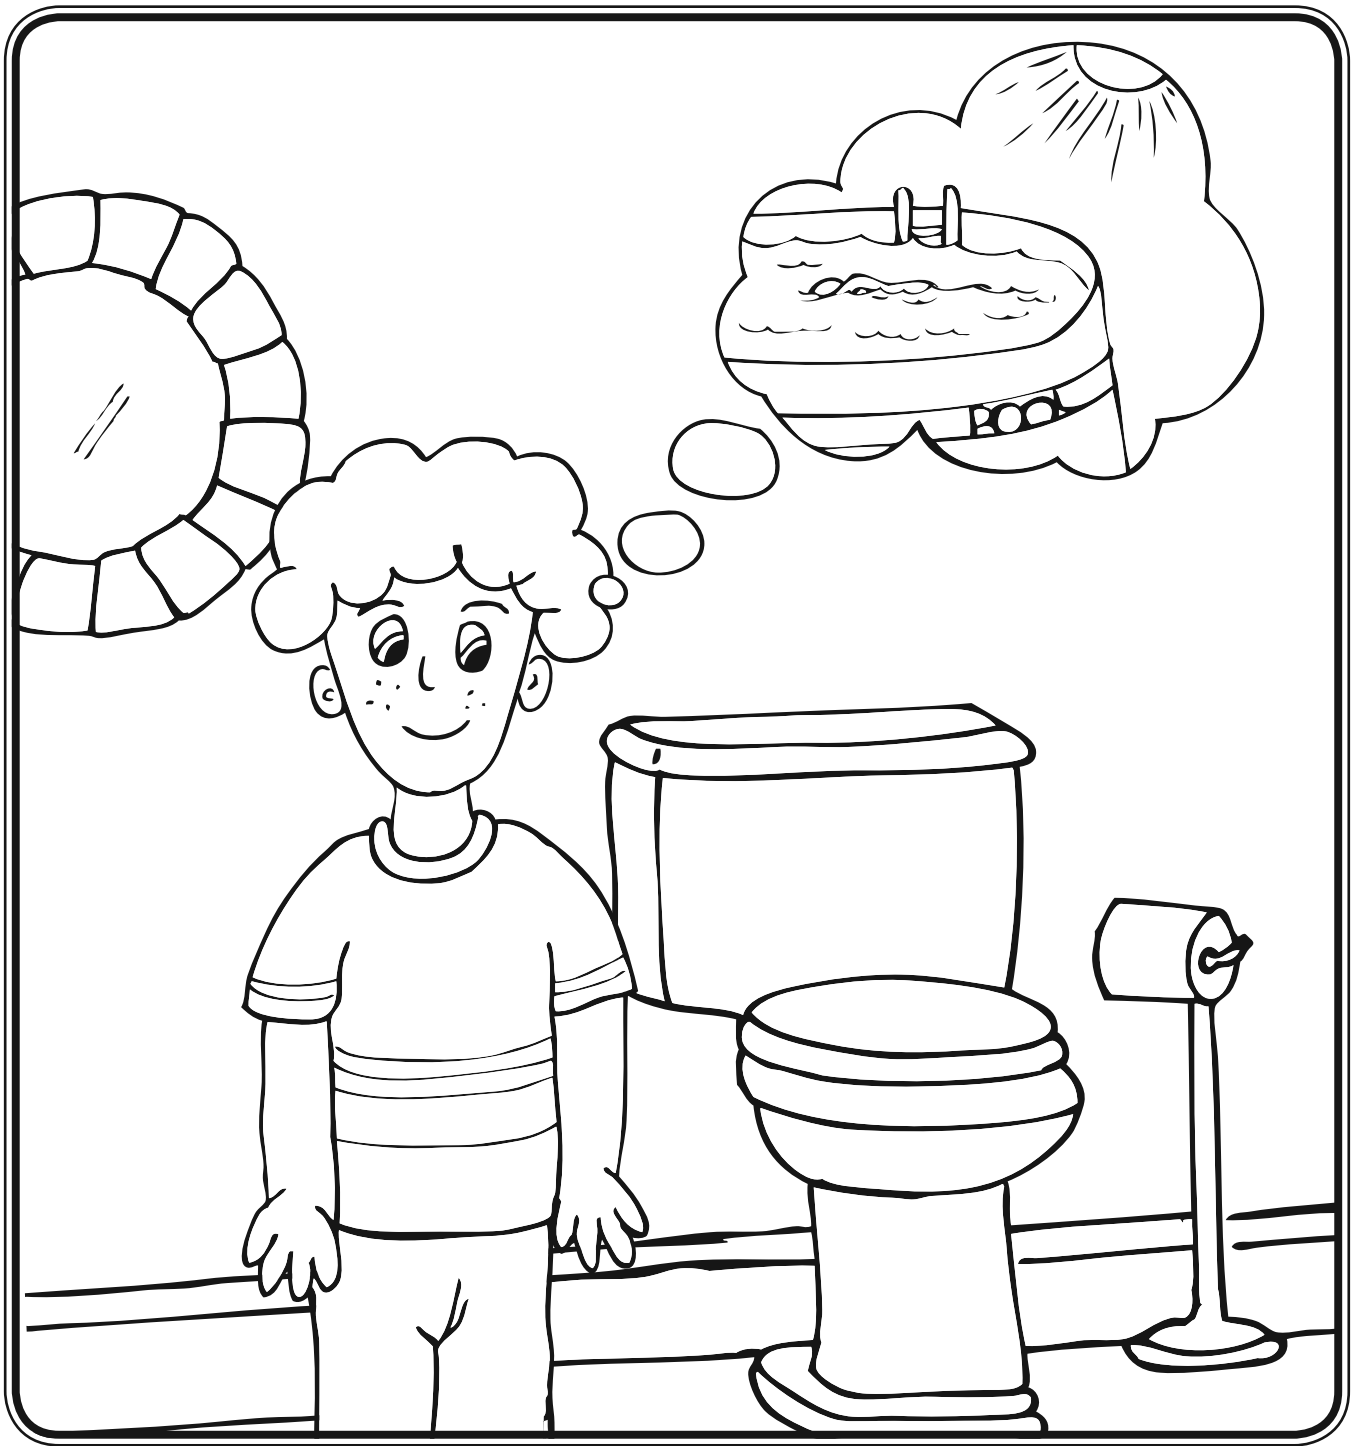

Using Gerber water saving faucets in your bathrooms can help save two gallons of water per minute.

Turning off the water while brushing your teeth all year can save enough water to fill a tank with six small sharks!

Flushing a water saving toilet like the Gerber Ultra Flush® will save an average household 15,000 gallons of water per year! Enough to fill a swimming pool!

To save even more water,
keep your shower under five minutes!

You can do your part by using Gerber Faucets and Toilets!
