

# SDL | PORTAL

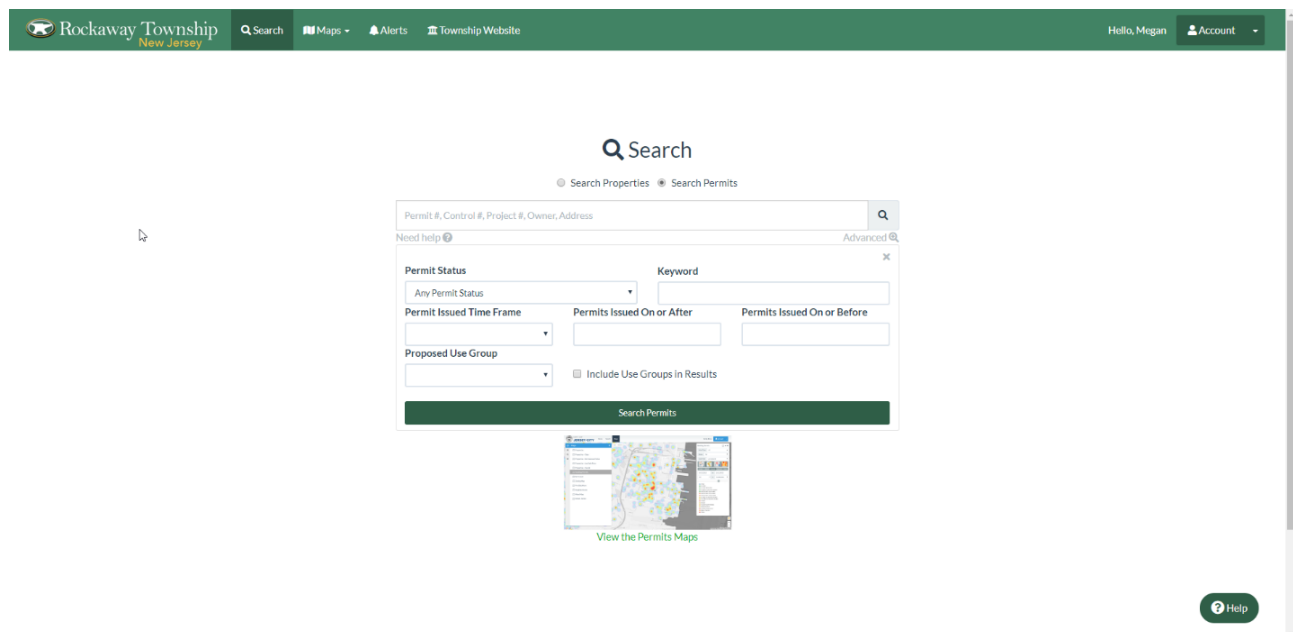

Did you know you have access to different township data requests and maps, all from the comfort of home?

Rockaway Township is now on the Spatial Data Logic (SDL) Portal!

SDL Portal is a cloud-based application, designed to give you convenient access to township data wherever you are.

The Portal's search feature allows you to search township properties, or locate existing and past permits, using full or partial owner permit information.

The Portal syncs in real-time, which ensures you are getting the most up-to-date information available.
